SKILLS

Frontend

HTML5 · CSS3 · SASS/SCSS · JavaScript (ES6+) · React.js · Vite · Responsive UI

CMS & Backend

WordPress (Custom Theme) · MySQL · PHP (basic) · Firebase · REST APIs

Tools & AI

Git · ESLint · Prettier · Docker (basic) · Vercel · Gemini · GitHub Copilot

Operating Systems

Linux (Manjaro, Arch) · Windows

EDUCATION

Saigon University (SGU)
Engineer's Degree in Information Technology
2017 – 2021

LANGUAGES

Vietnamese	Native
English	TOEIC 550

NGUYEN DUC ANH TUAN

FRONTEND ENGINEER

Frontend Engineer with hands-on experience designing and shipping web projects for diverse clients. Beyond writing code, I enjoy owning the whole product journey — from turning ideas into designs to deployment and operation — with a strong eye for distinctive, brand-driven UI.

EXPERIENCE

Freelance Frontend Developer
2021 – Present

Self-employed · Remote

- **End-to-end web development:** set up and deploy websites from scratch with React, Vite and optimized WordPress; build SEO-friendly e-commerce sites and landing pages that are fully responsive on every device.
- **Aesthetic mindset & SASS:** combine SASS/SCSS with an art background to craft "Cinematic" and "Moody" interfaces tailored to each brand instead of generic templates.
- **Clean code & performance:** write maintainable code and optimize page load speed; use ESLint, Prettier and Git so every delivery is stable.
- **AI-powered workflow:** integrate LLMs for content, debugging and code-structure optimization, cutting project delivery time by **~30%** without sacrificing quality.

PROJECTS

Belleza Lab
Live · GitHub

Artwork analysis & palette generator · **React.js · Vite · SASS/SCSS · AI integration**

- AI-powered platform for artists and designers that analyzes artwork mediums and textures and extracts color palettes, with a built-in assistant, "Belle".
- Designed the artistic, intuitive UI; integrated AI models to parse uploads, recognize art materials and render palettes dynamically.

Nexus CMS
Live · GitHub

Personal portfolio CMS · **React.js · Firebase (Firestore) · Vercel**

- Responsive portfolio system showcasing projects and skills; built the core frontend architecture, Firestore-backed content and image updates, and tuned performance on Vercel.

GenshinHub
Live · GitHub

Game database & utilities · **React.js · RESTful APIs · CSS/SASS**

- Database app for Genshin Impact players (characters, weapons, mechanics); handled data fetching and state for large datasets, a responsive UI matching the game's aesthetic, and localized routing.

Pokedex
Live · GitHub

Interactive Pokémon explorer · **React.js · PokeAPI · HTML5/CSS3**

- Search, filter and view detailed stats and abilities; real-time data from a third-party REST API with smooth async loading and a clean, mobile-first interface.

GameHub
GitHub

Game discovery platform · **React.js · RAWG Video Games API**

- Browse and search games across platforms and genres; built filtering and sorting, managed complex UI state and optimized component rendering.
